Keywords: PHP Time Format Australian Xoops

Summary: Just little tips for newbies like me ;o)

**Australian Time format for display**

```
google_ad_client = "pub-2961231106815997";
//tg-468x60, created 11/6/07
google_ad_slot = "4380831145";
google_ad_width = 468;
google_ad_height = 60;
//-->
src="http://pagead2.googlesyndication.com/pagead/show_ads.js">
```

If for instance you want the Australian time format eg. day - month - year - time, this is what you add to an input field that has an option to set the time format, I come across this frequently on the CMS I use Xoops.

It may come in useful for others as well with other systems or tools they use, yes I know it's basic stuff that probably a monkey could work out, but here it is.

**d-M-Y H:i**

```
google_ad_client = "pub-2961231106815997";
google_ad_width = 468;
google_ad_height = 60;
google_ad_format = "468x60_as";
google_cpa_choice = "CAEQABoIAHN6hFgrhhco28P3cw";
google_ad_channel = "6425476891";
//-->
```
